## SUMMARY

Self-taught Full-Stack Web Developer who designs, builds, and deploys production-ready web applications from concept to launch. Proficient in Next.js, Node.js, Express.js, MongoDB, PostgreSQL, and Go, with hands-on experience in real-time systems (Socket.IO, LiveKit) and a growing focus on application security. Passionate about solving real-world problems through scalable products and clean, maintainable code.

## TECHNICAL SKILLS

**Languages:** JavaScript, TypeScript, Go, SQL, Python, HTML5, CSS3

**Frontend:** Next.js, React.js, Tailwind CSS, Shadcn/UI, Zustand, Framer Motion, GSAP

**Backend:** Node.js, Express.js, REST APIs, Socket.IO, Authentication (JWT, OAuth)

**Databases:** MongoDB, PostgreSQL

**Tools & Technologies:** Git, GitHub, Linux, Bun, npm, pnpm, Vercel, LiveKit, Appwrite

**Core Concepts:** Full-Stack Development, Real-Time Systems, API Development, Database Design, System Design, Performance Optimization, Application Security Fundamentals

## PROJECTS

**CampusZen** — Verified social network for college students

Live: [campuszen.tech](https://campuszen.tech)

*Next.js, MongoDB, Tailwind CSS, Appwrite, LiveKit*

- Built a verified student network with college-email verification; reached 80+ daily active users at soft launch.
- Implemented real-time DM and group chat, plus LiveKit voice chat with presence indicators and participant counts.
- Designed a virtual-currency economy with a server-side ledger, atomic transactions, and Redis-based anti-farming caps, alongside a cosmetic shop (avatar frames, chat themes).
- Shipped a 49-theme CSS-variable theming engine, PWA and Android APK builds, and an admin panel; ran performance and security audits across the codebase.

**Kivo** — Realtime chat platform with DMs, groups, and Discord-style Spaces

Live: [kivo.usersynax.dev](https://kivo.usersynax.dev)

*Next.js, React, Node.js, Express, Socket.IO, MongoDB, LiveKit*

- Built a full-stack realtime messaging platform with DMs, groups, and Spaces (channels, roles, threads, reactions, polls, typing indicators, read receipts).
- Integrated LiveKit voice and video calling for DMs and groups, and Google and GitHub OAuth login.
- Implemented JWT access tokens with httpOnly refresh cookies, optional TOTP two-factor authentication, and an admin panel with moderation and audit logging; ran a full-codebase security audit and triaged findings by severity.
- Added offline-first PWA behavior (service worker, IndexedDB caching, durable outbox queue), web push notifications, and a premium tier with UPI payment claims and admin review.

**Nox** — Debugging practice and competition platform

In development

*Next.js, TypeScript, Node.js, Express, MongoDB, Socket.IO, Redis*

- Building a platform where developers receive broken code, find and fix the bug, and prove the fix through automated tests.
- Designing a sandboxed, queue-based execution pipeline (isolated workers, Redis and BullMQ) to run untrusted JavaScript, TypeScript, and Python submissions safely.
- Planning a competitive layer with Elo-style ratings, XP and ranks, leaderboards, and streaks, with a Monaco-based in-browser editor.

## WORK EXPERIENCE

**Full Stack Web App Developer Intern**

Jan 2026 – Apr 2026

- Built and shipped 2 production-ready web applications serving real users.
- Collaborated with a development team to design, develop, and deploy scalable features.
- Participated in end-to-end product development, including planning, implementation, testing, and deployment.

## EDUCATION

**Senior Secondary (Class XII)** — National Institute of Open Schooling

Pursuing

**High School** — National Institute of Open Schooling

2024
